

## DIRECT RAMBUS™ CLOCK GENERATOR

### FEATURES

- **400-MHz Differential Clock Source for Direct Rambus™ Memory Systems for an 800-MHz Data Transfer Rate**
- **Fail-Safe Power Up Initialization**
- **Synchronizes the Clock Domains of the Rambus Channel With an External System or Processor Clock**
- **Three Power Operating Modes to Minimize Power for Mobile and Other Power-Sensitive Applications**
- **Operates From a Single 3.3-V Supply and 120 mW at 300 MHz (Typ)**
- **Packaged in a Shrink Small-Outline Package (DBQ)**
- **Supports Frequency Multipliers: 4, 6, 8, 16/3**
- **No External Components Required for PLL**
- **Supports Independent Channel Clocking**
- **Spread Spectrum Clocking Tracking Capability to Reduce EMI**
- **Designed for Use With TI's 133-MHz Clock Synthesizers CDC924 and CDC921**
- **Cycle-Cycle Jitter Is Less Than 50 ps at 400 MHz**
- **Certified by Gigatest Labs to Exceed the Rambus DRCG Validation Requirement**
- **Supports Industrial Temperature Range of –40°C to 85°C**

### DESCRIPTION

The Direct Rambus clock generator (DRCG) provides the necessary clock signals to support a Direct Rambus memory subsystem. It includes signals to synchronize the Direct Rambus channel clock to an external system or processor clock. It is designed to support Direct Rambus memory on a desktop, workstation, server, and mobile PC motherboards. DRCG also provides an off-the-shelf solution for a broad range of Direct Rambus memory applications.

The DRCG provides clock multiplication and phase alignment for a Direct Rambus memory subsystem to enable synchronous communication between the Rambus channel and ASIC clock domains. In a Direct Rambus memory subsystem, a system clock source provides the REFCLK and PCLK clock references to the DRCG and memory controller, respectively. The DRCG multiplies REFCLK and drives a high-speed BUSCLK to RDRAMs and the memory controller. Gear ratio logic in the memory controller divides the PCLK and BUSCLK frequencies by ratios M and N such that PCLKM = SYNCLKN, where SYNCLK = BUSCLK/4. The DRCG detects the phase difference between PCLKM and SYNCLKN and adjusts the phase of BUSCLK such that the skew between PCLKM and SYNCLKN is minimized. This allows data to be transferred across the SYNCLK/PCLK boundary without incurring additional latency.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

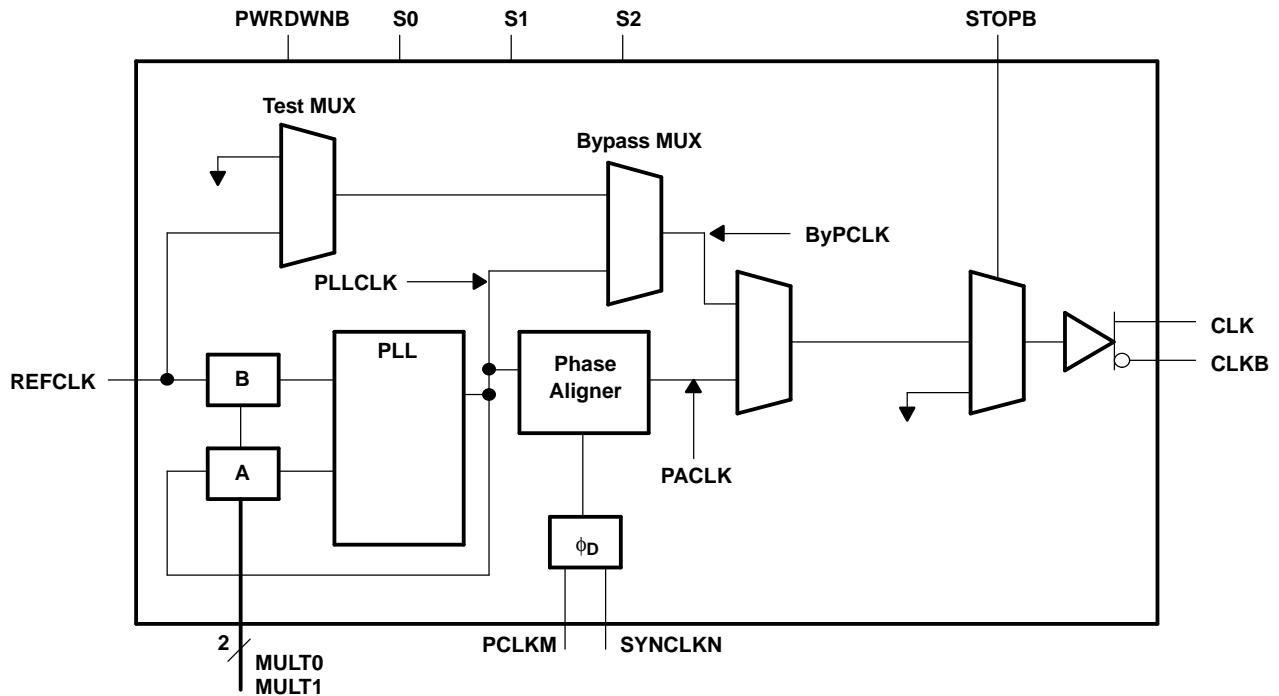

DIRECT RAMBUS, Rambus are trademarks of Rambus Inc.

User control is provided by multiply and mode selection terminals. The multiply terminals provide selection of one of four clock frequency multiply ratios, generating BUSCLK frequencies ranging from 267 MHz to 400 MHz with clock references ranging from 33 MHz to 100 MHz. The mode select terminals can be used to select a bypass mode where the frequency multiplied reference clock is directly output to the Rambus channel for systems where synchronization between the Rambus clock and a system clock is not required. Test modes are provided to bypass the PLL and output REFCLK on the Rambus channel and to place the outputs in a high-impedance state for board testing.

The CDCR83A has a fail-safe power up initialization state-machine which supports proper operation under all power up conditions.

The CDCR83A is characterized for operation over free-air temperatures of  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

## PLL DIVIDER SELECTION

Table 1 lists the supported REFCLK and BUSCLK frequencies. Other REFCLK frequencies are permitted, provided that (267 MHz < BUSCLK < 400 MHz) and (33 MHz < REFCLK < 100 MHz).

**Table 1. REFCLK and BUSCLK Frequencies**

MULT0	MULT1	REFCLK (MHz)	MULTIPLY RATIO	BUSCLK <sup>(1)</sup> (MHz)
0	0	67	4	267
0	1	50	6	300
0	1	67	6	400
1	1	33	8	267
1	1	50	8	400
1	0	67	16/3	356

- (1) BUSCLK will be undefined until a valid reference clock is available at REFCLK. After applying REFCLK, the PLL requires stabilization time to achieve phase lock.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBsolete:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.
